

Creating a just, peaceful and prosperous world

The Dark Side of the Web:

Challenges to Security, Prosperity and Privacy

Tuesday, March 8, 2016

Broad Auditorium (SIPA) 125
Modesto A. Maidique Campus (MMC)
11200 S.W. 8th Street
Miami, FL 33199

Summit Overview

In recent years, cyberattacks on private companies and government agencies have become increasingly destructive in scale and scope. These unprecedented attacks have raised important questions about how to secure the U.S. homeland, defend economic interests, and safeguard civil liberties. Hackers, cyber terrorists and other cyber criminals continue to launch debilitating digital attacks from around the world with relative impunity. To explore these and related issues in depth, FIU's fifth Geopolitical Summit will convene thought leaders from government, business, academia and law to discuss policies and actions that could mitigate cyber threats in an increasingly interdependent globalized world.
